

BEYOND INTELLIGENCE

THE SECURITY BLUEPRINT FOR YOUR AI IMPLEMENTATION

Wednesday, July 22, 2026 • 10:00 AM – 3:00 PM ET • Virtual Half-Day Seminar

AI isn't slowing down. Neither is the list of risks you need to manage.

Even the security teams paying closest attention to AI are still falling behind. The pace of change has outrun the controls, governance frameworks, and training that make up the programs they manage. By the time you've addressed one risk, two more have surfaced.

This seminar is for security leaders and practitioners who are ready to move past diagnosing the problem and focus on something about it. We'll cover the current and future threat environment, the governance structures that give AI adoption real accountability, and the technical controls that close the gaps. You'll leave with a concrete plan and a clear sense of where to start.

MORNING BLOCK — 10:00 AM TO 11:50 AM

10:00 AM

60 min

The AI Threat Landscape: What's Real, What's Hype, What's Next

Cody Kretsinger, Principal Security Advisor

KEYNOTE

Principal Security Advisor Cody Kretsinger opens the day by mapping exactly what attackers are doing with AI right now: how they're moving faster, hitting vulnerabilities your existing controls weren't built for, and running campaigns at a scale older defenses weren't designed to handle. He separates genuine risk from noise and covers what the next wave already looks like, so the rest of the day starts from an accurate picture rather than a general one.

11:00 AM

50 min

Built to Enable: Aligning AI Governance with Business Goals

Collin Page, CISSP, Security Advisor

SESSION 2

Principal Security Advisor Cody Kretsinger opens the day by mapping exactly what attackers are doing with AI right now: how they're moving faster, hitting vulnerabilities your existing controls weren't built for, and running campaigns at a scale older defenses weren't designed to handle. He separates genuine risk from noise and covers what the next wave already looks like, so the rest of the day starts from an accurate picture rather than a general one.

11:50 AM

Lunch Break

AFTERNOON BLOCK — 1:00 PM TO 2:40 PM

1:00 PM

50 min

Locking It Down: Building the Technical Controls That Mitigate AI Risk

Aidan Brown, Senior Security Advisor

SESSION 3

Galactic's Senior Security Advisor Aidan Brown draws on years of hands-on threat research and penetration testing, and this session is built around what that work produces. He covers the specific technical controls needed at each layer — model, agent, data exposure, access control — and explains why each one matters. Concrete, implementation-focused, and built for teams ready to act on what the morning covered.

1:50 PM

50 min

AI Leadership Strategy: Cementing a Culture of Security

Seth Loe, CISSP, Chief Security Officer

SESSION 4

Good policy doesn't enforce itself. Chief Security Officer Seth Loe addresses the part no framework covers: why people work around security requirements and how leadership changes that. Drawing on two decades at the intersection of security and executive decision-making, he walks through what it takes to build a security culture that holds. One where secure AI usage is practiced at every level rather than mandated from the top and quietly ignored everywhere else. This final session is the culture-building playbook.
